LARD.

The market for western opened on Tuesday at 11⅜, ruling about steady at this figure until Saturday, when holders were willing sellers at 11c, closing on Monday at 10⅞. City has been in good demand at easy figures, opening on Tuesday at 11, at which small parcels have been disposed of, and closing on Monday at 10½c. Stearine has been in good request at steady figures, holders quoting 14½@14¾c for prime western.

TALLOW.

There has been a good demand during the past week, and prices are steady at 8⅝@8½c for round lots, though some parcels are held for a higher figure. Sales 500,000 lbs.

PETROLEUM.

The market during the past week has been moderately busy and rules steady in price; refined opened on Tuesday at 17¾c, and prices have been steadily held all through the week, closing at 17¾ on Monday. Crude has been in fair demand at firmer prices, holders asking 10¼ in bulk, and 14¼c in shipping order. Cases in fair demand, and round sales have been made at 21½@23. Naphtha has been quiet, but firmer in prices at 11c.

NAVAL STORES.

Spirits of Turpentine was in small demand at the opening on Tuesday, and prices were easy at 29½, at which figure the market was moderately busy until Friday, when parcels were offering at 29c, and at the close holders were asking 28¾c. Rosins have ruled quiet all week, and only small parcels have moved; strained rather easier at $1 55 @1 67½. Finer grades quiet and weak at our quotations. Tar has been in jobbing request, opening at $3 00@3 25, and closing firm on Monday at $3 75@4 00. Pitch quiet at $1 95@2 00.

LONDON MARKET REPORT.

London, July 29, 1876.

Oils Linseed—Owing to temporary scarcity on the spot has advanced to £24, forward there are sellers at £23 10s. In Hull the market has temporarily advanced to £26 from the same cause. Rape; brown is firmer at £33 on the spot and to end of the year. English refined £35. Cotton, crude £25. Refined quiet, £29 to £29 5s. Cocoanut; Ceylon is in more demand than other descriptions and has been sold rather freely at £37. Cochin quiet, £39 to £40. Sydney £32 to £36. Lard dull, sellers of best English at £57. Olive—Gallipoli has been sold at £45, but 10s advance is now asked. Palm; Owing to reduced stocks here owners are a shade firmer, and fine Lagos is quoted at £36 to £36 10s.

Seeds—Linseed is scarce on the spot, and Calcutta is worth 47s ex ship, and 48s from warehouse. Bombay seed has been sold at 49s ex ship for a few hundred tons close at hand and 50s for October-December shipment via the Cape to Hull, at which there are further buyers. Rape steady, Calcutta brown 51s in all positions. Poppy 44s to 44s 6d on the spot and to arrive. Sim sim quiet, 42s to 45s for brown, and 45s to 50s for white.

Linseed cakes.—There has been a fair demand owing to the long continuance of dry weather, and our late quotation of £11 for bbls and £10 to £10 5s are maintained.—Decorticated cotton seed cake is saleable at £8 ex warehouse.

Naval Stores.—Spirits of turpentine.—The "Hilding" has arrived from Wilmington this week with 1580 barrels. Our stock in warehouse on the 24th inst. was 18,197 barrels against 15,712 in 1875, and the quantity now afloat is 14,850 barrels against 5076 barrels at same time last year. The market has ruled very steady at 23s 6d to 23s 7½d on the spot, 23s 9d being generally demanded, but closes dull at 23s 6d owing to the above arrival, with rather more disposition to sell at that price. Business has been done at 23s for September to December delivery. Rosin. — Soapmakers' kinds are very quiet and meet with but little enquiry, but strained has advanced to 5s in warehouse and 5s 1½d for arrival, at both of which rates sales have been made. Holders now ask 5s 1½d and 5s 3d respectively, but so far have not been able to establish any further improvement.

Oils.—Crude sperm is quite nominal at £84, there being no buyers at the moment and the weather having been too hot for bagging Southern oil of good quality would find ready buyers at £33 to £35.

Petroleum.—The continued advance in America and improved quotations from the Continent have materially strengthed our market, and prices are now fully 1d per gallon higher than at the date of our last circular; Is 1½d is paying on the spot for standard white, and Is 1¾d for the last four months. The week's deliveries have been 1602 barrels against 2518 barrels at same time last year, and to-day stocks are 40,844 barrels against 56,583 in 1875.

Spermaceti.—There is nothing doing and prices are entirely nominal at Is 1d in the absence of buyers. 200 cases have arrived from New York.

Tallow met with a moderate demand at the auctions, about 1300 casks selling at barely previous prices. No North American offered. good worth 40s to 41s. P. Y. C. new 46s, old 45s 6d.

SAN FRANCISCO, August 2, 1876.

China Nut.—Imports have been heavy during the month—three vessels bringing 2830 cs. The result was the lowering of the market 1½@2c during the month, but it has again advanced 1½c We quote the market 62½c (a decline) —Jobbing at 65@67½c.

Lard Oil—There is a downward tendency notable. The market may be given at $1 15 in bbls and $1.25 in cs for best Winter Strained, $1.20 in cs and $1.15 in bbls for No. 1, and $1 05 in bbls and $1.10 in cs for No.2. We quote W. F. & Co.'s brand of Winter Strained at $1.15 in bbls and $1.25 in cs.

Castor.—We note two reductions by the Pacific Oil and Lead Works during the month—one during the week. Imports of Eastern have equaled 1050 cs and 10 bbls—of English, 28 cs. The market is quotable at 95c in cs and 90c in bbls for California No. 1, 90c in cs and 87c in bbls for No.2, $1 05 for Baker's AA.

Gasoline.—The market is quotable at 30c.

Linseed.—Demand is fair. California sells at 62½c for raw, and 67½c for boiled, a reduction of 2½c during the past week. Jobbing 5c higher. We quote Eastern 70c.

Polar, etc —Is quotable at 62½c jobbing, and scarce; the South Carolina cleared yesterday with 23 cks (5194 gals) of sperm for New York.

Neatsfoot.—We quote California at 90c @$1, with a light demand.

Coast Whale, etc.—We quote the market at 52½@55c.

Cocoa.—We quote the market at 60c, an advance of 2½c.—*Jour. of Com.*

SEEDS.—Caraway, hemp, celery, cardamons, fennel, &c. Imported, and for sale by GEO. F. GANTZ & CO., 176 Duane st., N. Y.

OIL MARKET.

NEW YORK, Tuesday Ev'g, August 15.

Linseed oil has been in light demand, with jobbing sales at 52@53c, and no large lots offering that we hear of.

The market for crude whale remains dull here, with a few transactions at the East.

Sperm is selling slowly.

Lard oil has come to hand freely for a week or more from the West, but most of the lots have been a little off in quality, and generally very weak summer make. There were two lots disposed of, in all about 150 barrels, at 77c and 77½c which is all they will bring. There is a lot of 52 cold test which is held at 90c, a price more than its value. The dealers report some inquiry for a winter make oil, and a good article would bring a fair price. The lower grades of present make oil are easier, and a very good No. 1 can be had at 66c. In prime city we note sales of 150 bbls at 80½@83c.

Crude cotton seed oil meets with a better demand, and jobbing sales are making quite freely at higher prices, though a lot of 50 bbls sold from dock at as low a price as any this season. The sales from jobbers are 50 bbls at 40 @42½c, closing steady.

Summer yellow is steady, but in rather better demand for home use. There are some parcels to be had to arrive at 46½c, but a very prime lot would bring 48c. There are free sellers, but the market seems to be gathering more strength with the stock getting into few hands.

Winter cotton seed oil has jobbed at former prices; there is rather more demand for it.

Menhaden oil has not come to hand very freely, but the supply is equal to the demand as dealers have a stock and do not care to buy large lots except at a low price. There has been a shipment of 1000 bbls Maine oil sold at 34c, and 400 bbls Sound oil part for shipment at 32@33c.

Bank oil is jobbbing at 36@37c.

Straits oil is jobbing at 38@39c.

Domestic cod is taken by dealers at 50c. and jobs at 55c.

Olive is dull; a good article is jobbing at $1 20.

Neatsfoot oil is easier, and only the very choicest will bring our prices.

Palm oil is easier in price here as we have a better supply from Boston.

Cocoanut oil is in full supply, and Ceylon can now be had at about 10c in a large lot. There has been a considerable arrival from Cuba, which is offering for sale.

Red oil has not changed, saponified bringing 56@57c from store, while 55c to arrive would probably buy.

Elaine has been dull and easy; 58c would buy some kinds.

Paraffine oil has been offering freely to arrive, but has not been forced, and steady prices, say 19@21c, have been obtained for 350 bbls Pittsburg 25 gravity. Some makes are held for higher prices, and 24c is the lowest price for Cleveland M & M brand.

There have been large arrivals of mineral lard oil, and the price for all neutral oils is weak and the sale of any one brand small.

Rosin oil is dull and nominal for large lots.

Tallow oil is selling in a small way.

West Virginia oils are in moderate demand with sales of 200 bbls, 28 reduced, Franklin at 18c and 75 bbls, 29 reduced at 16c.

OIL CAKE.—The market for Western oil cake is generally regarded as dull, particularly for those ordinary brands of oblong. There has been a falling off in ocean freights and this should help prices. There was a sale last week of 50 tons ordinary oblong at $38 75, but since 150 tons choice at $39 25 and 200 tons broad thin "K & M" at $40 25. We he ar that the contracts alluded to by us some time since were for about 2000 tons for 6 to 7 months delivery at a price equal to $40, delivered in Philadelphia. There has been a transaction in city E. I. cake of 200 tons at $37 50 gold.

SEEDS—There have been several parcels of Calcutta linseed in, but they went to store, as buyers would not pay $1 77½ gold. Holders of seed say that crushers are without either seed or oil, and that these low prices for Western oil are only to keep Eastern crushers from buying Western seed, and that as soon as the West have obtained their supply they will not have any oil or seed to send to this market, and then city crushers will have to pay the prices demanded by them for Calcutta seed.

We do not hear of any sales of domestic seed except 4 car loads at $1 42½ delivered.

New Bedford Oil Market.

New Bedford, Aug. 14, 1876.

The crude sperm oil market has been dull the past week, and we have but a single transaction to report: 100 bbls for export at $1 28c.

The crude whale oil market has been quite active, and the following sales have been made: 220 bbls southern for export, at 53c; 725 bbls northern for manufacture, at 58c.

NEW HAVEN, Aug. 14, 1876.

Fish increased in numbers in Long Island Sound last week, but not in quality. They are still small and thin.

Price Current.

Oils—Duty in gold: Olive in casks, 25c; Salad, in bottles or flasks, $1; Linseed or Flaxseed, 7½ lb to gallon 30c. Hemp Seed, 25c; Cotton Seed, 30c per gallon Neats' Foot, Sperm, Whale, Seal, and other Fish of Foreign Fisheries, 20 per cent ad val; Cocoa Nut free; Crude Petroleum, 20c, Refined, 40c per gallon; castor, $1 per gallon.

MORDAUNT BRO.'S MARKET REPORT

London, July 31, 1876.

Refined Petroleum.—The actual demand has been small, but considerable business has again been done for future delivery—August at 13d@13½d, the latter now the lowest price; September to December, 13¼d@12¾d; closing at 13⅝d. Spot price is also firmer, and 13½d has been paid for some quantity. A portion of a cargo for London was sold at 13d c i f.

Spirit.—Common being scarce and in few hands, the holders now ask higher prices.

Coal Oil.—The supply is very limited, and the refiners of well known brands are very indifferent about contracting forward. Business done on the spot at 11¼d@12¼d.

SIMSON BROTHERS' MARKET REPORT.

COCANADA, June 23, 1876.

Oil Seeds.—Gingelly seed is at an end, and it is reported from the North that dealers will be unable to complete all the contracts they have given. For the September crop rain still fails us here and the last news from the northern districts is not so favorable as the previous. The monsoon, however, seems close upon us now, and we trust that abundant rain will soon fall. Rapeseed, also, is practically exhausted. A few petty lots from time to time make their appearance in the market and find buyers at Rs. 12 f o b say 44s, 9d c & e c to London. Nig seed is in a very similar position and what tle still remains in the hands of dealers is held by them at Rs 6-12 f o b or say 36s, 3d, c&f to London.

--It is now said that leading railway companies propose to build a short pipe from the oil regions to the seaboard, and thus get ahead of the Pennsylvania Transportation Company's project. This rumor may have been started for effect.

--An oil train was destroyed by fire on Saturday morning one mile west of the Roselle station on the New Jersey Central Railroad.

—It is expected, says the Boston *Journal*, that there will be another default on the extended Sprague notes. The Sprague Mills in Cranston and other parts of Rhode Island are either closed or running with small help.

PAINT MARKET.

New York, Tuesday Ev'g, Aug. 15.

The following will show the total imports of paints for week ending Aug. 12:

Barytes 265 bbls; bronze powder 5 cs; chalk 200 tons; China clay 100 cks; chrome yellow 6 pkgs; Dutch pink 10 kegs; filling up 60 pkgs; glue 4 cks; iron oxide 25 kegs; paint 41 pkgs; rose pink 15 pkgs; smalts 11 pkgs; varnish 1 cs; vermilion 3 cks; white lead 257 pkgs; zinc oxide 100 bbls.

The exports since January 1, 1876, are as follow:

	Pkgs.	Values.
Oxide of Zinc	2370	$34,727
White Lead	261	2,051
Red Lead	5	48
Ultramarine	5	441
Vermilion	25	1,666
Paints not spec	2431	52 322
Varnish	1191	19,110

The market for paint shows no activity the sales being very light as usual at this season of the year. The orders coming in for either large or small lots are comparatively few, but all look for a good business later on. There have been no important changes in the market, and imports are moderate. We notice the re exportation of a lot of 5 cases vermilion, at the same time imports of some 8 000 lbs in casks from England.

City brands of lead in oil are steady, jobbing at 10½c, and the usual amount at this season of the year is selling; dry is held at 8¾@9c. English B B lead is selling at 10⅛@10⅝c; 12 tons sold from dock and store at these prices.

French zinc has sold only in a jobbing way at 8¾c gold for V. M., from dock. Store lots held at 8⅞@9c: L Z O is dull at 8½c gold.

American zinc has been quiet at 6c for a good article, and 7½c for Lehigh.

Chalk last sold to arrive at $1 90 currency.

Whiting has sold to the extent of 50 bbls common, and 40 bbls gilders at the combination which is 60@65c for common, 80@85c for gilders, and 25c for pkgs.

Bolted whiting is quoted at 1¼c.

Paris white has been in very limited demand on spot at $1 65@1 70 gold from store. None offering to arrive. Domestic has sold at $1 70 currency.

China clay of paper makers' quality is selling fairly and kaloomining quality is rather quiet; 10 tons best sold at $24 50 currency, and 20 tons paper makers' sold at $18 gold. American is selling at $14@15 cy.

Barytes—There was a sale last week of 50 tons foreign at $33 50 currency. Eastern refined held at $32@35; Western refined $40, and best Western floated at $45@48; and imported at $38@39 per ton.

Orange mineral is jobbing at steady prices, with last sales of 6 casks F B & W, at 11¼ gold; kegs 11¾c, gold; Cooksons 11½c gold on spot.

English red lead in single packages is selling at 9½c gold, American 8½c currency.

Ochre in fair demand and held at a firm price. There was a sale some time since of N. M. B. at 1½c gold, and J. C. Havre sold at 1½c gold.

Venetian Red is dull, Cookson's jobbing ex store at 2c. currency. There was a small sale ex dock at $1.90.

Quicksilver vermilion is jobbing slowly at firm prices. The list prices are: In lots of 300 lbs and over, in 30 lb or 50 lb. bags, 70c. gold. In lots of less than 300 lbs. in 30 lb. or 50 lb. bags, 72½c. gold. In bulk, kegs of 100 lbs. or over, ½c. per lb. less. Terms, cash in ten days, or interest added.

Chinese vermilion is jobbing at 80c gold.

American is dull, with jobbing sales at 15c@16c.

Carmine is selling fairly in lots as wanted. Prices of the Associated Manufacturers for pure No. 40 carmine were reduced as follows: In bulk 1 to 10 lbs, $5 35 per lb; 10 to 25 lbs, $5 20 per lb; 25 to 50 lbs, $5 10 per lb; 50 lbs and upward, $4 85, all gold. In 1 lb. bottles or boxes, $5 50, $5 35, $5 25, $5, all gold. In 1 oz. vial, $1 gold per lb more; Nakarat, $1 gold per lb more than No. 40; cash, 30 days.

Paris green dull, the only orders are for small lots from the South at 26c for pure.

VARNISH FOR IRON AND STEEL

Resin, powdered	120 parts.
Sandarac	180 "
Shellac	50 "
Oil of turpentine	120 "
Alcohol	180 "

Melt the three first ingredients by a gentle and well regulated heat, add the turpentine by small portions stirring all the while, and when all the resins are dissolved, add the alcohol, and filter through paper. It is said to be very effective in preserving steel and iron from rust.

HOW HOT IS IT?

A Tagliabue Standard Thermometer will tell you. Send $1 25 for which you will receive one post paid.

White Lead.

FALLING OFF IN IMPORTS.

The table given below will show that during the six months preceeding July 1 the imports of foreign lead show a large falling off compared with several previous years. This, it is said, can be accounted for by the fact that two of our leading manufacturers in this city have succeeded in making a lead as white as the Brandham Bros., which quality alone sold it in this country. That the American lead has more body is a point well established. but this one brand of English make has always kept its hold here on account of its whiteness, and brought several cents per pound more than the American. Other foreign brands of lead seldom come to this market.

By request we repeat the above article, there having been several typographical errors in it last week.

EUROPEAN PRODUCTION OF COAL TAR.—The statistics of Great Britain show that the annual production of coal-tar in that country is 130,000 tons, in Belgium 10,000 tons, and in France 35,000 tons, of which the city of Paris alone produces 25,000 tons. In regard to the value of this incidental product it must be stated that before the invention of the manufactory of anilin colors from coal-tar, it was worth from $1 20 to $2 per ton, but at present in France it is worth about ten times that amount, so that a substance formerly an incidental product of little value, has become so valuable as to be now a considerable item in the economy of gas manufacture.

Pennsylvania White Lead Works.

The Original "Fahnestock Lead."

ON REVERSE OF KEG.

In 1844, the B. A. FAHNESTOCK brand of White Lead was first offered to the Trade, and was soon acknowledged as the STANDARD OF PURITY, WHITENESS, COVERING PROPERTIES AND DURABILITY, which position it still maintains.

On January 1, 1866, the brand and firm name were changed to

"FAHNESTOCK, HASLETT & SCHWARTZ,"

which change was considered necessary to protect purchasers against imitating and closely resembling brands.

Having recently engaged largely in the production of Refined Pig Lead, in order to avoid confusion and insure prompt attention to orders and inquiries, our patrons will, hereafter, please address all communications relating to our brands of

WHITE LEAD, RED LEAD, ORANGE MINERAL AND POTTERS' LEAD

to C. F. WELLS & CO. Pittsburgh, Pa.

Chemical Market.

NEW YORK, Tuesday Ev'g, Aug. 15.

We have to note more inquiry and better prospects for the heavy chemicals in the near future than for a long time. The reports from glass makers all over the country are very encouraging, most of them are about starting up with orders in hand and they confidently expect a profitable and steady business during the season. The volume of transactions have not materially increased but they are fair, and buyers show a disposition to take contracts, while sellers generally ask an increase on former rates.

Soda ash is steadier in price; 48 per cent carbonated, held on spot at 1 92½ gold, and at 1 90 gold to arrive. There are buyers for the next four months' shipment at 1⅞c gold, but sellers are not willing to accept this price. There was a sale of 25 tons Newcastle 55 per cent on spot at 1¾c gold for 48; to arrive 1 80 is asked, but this is above buyers' views. Caustic ash is dull and sales very few; 10 tons ordinary brought 1¾c gold. Johnson's held at 2 05c gold, and Sullivan's at 2 15c gold, with small sales. Tennant's 1 90c gold.

Caustic soda is easier for both kinds, there having been free arrivals. There was more 60 per cent than high test, and the prices were brought together, 4⅜c gold being asked for choice brands of either 60 or 70 per cent. There was a bid of 4¼c gold made to arrive, but refused, and 50 drums 70 per cent sold at 4 30c. The supply on the way is full particularly of 70 per cent. In Boston 4¼c gold will buy lots to arrive.

Sal soda had come in freely about the date of our last and there were sellers at 1¼c gold, but large parcels were hard to move. The lots being on dock for several days and some parties being unwilling to store shaded this price and closed out at 1 20@1 22½c gold, but others stored rather than shade 1¼c gold, and at the close 1¼c gold from dock and 1 30c gold from store is the best that can be done, but these will buy lots as wanted. The sales for a week foot up over 500 tons.

Bleaching powders are still dull, but there is a little better inquiry. Prime Liverpool hard wood brands can be had in lots at 1⅜c currency, with 150 casks sold at this price.

Chlorate of potash is jobbing rather more freely, and 50 kegs sold at 20¼c gold, and 40 kegs Greenbank at 20½@20⅝c gold.

Brimstone is falling back to its old price, as the duty scare seems to have somewhat subsided, though no official notice has as yet been given of any decision having been reached by the Secretary of the Treasury. We have been informed by a high official that the probability is that a decision in favor of importers will be given for the reason that no one will press the claims of the government. There is a report that a parcel has been sold in Philadelphia at $31.50 gold, though last week 100 tons sold here at $34.50 gold, but since 200 tons sold at a private figure but understood to be at less than the previous sale. These were all old store lots, and most other parcels are held at $35 gold.

Nitrate of Soda is quiet and sales are small; 500 bags are reported at 2⅞c gold, though this can be shaded for a large lot.

Cream tartar is firm for French, and 31c gold will buy a parcel. American is variable, some parties offering at 29c gold, while others refused 29½c gold, and held for 30c gold.

Argols have been quiet and sales are small.

Acetate of lime has sold to the extent of 30 tons English grey at 5⅜c gold.

Alum is in fair demand, with sales of 75 bbls English at 2½c cy.

Oxalic acid has sold in a jobbing way at 9⅞c gold to the extent of 12 casks. Holders generally ask 10c gold.

Stannate of soda of best English make can be had at 16c gold.

Sugar of lead, white, has been selling quite freely since the advance, from second hands, who had cheap stocks.

Blue vitriol has sold to the extent of 40 bbls at 7½c.

Carbonate of ammonia has sold to the extent of 20 casks at 13⅜ gold.

Sal ammonia is selling at 10⅝c gold.

Alum cake sold to the extent of 50 tons at 2c gold.

Acetic acid—Commercial is jobbing at 6@6¼c per lb for No. 8.

Sulphuric acid is firm and in good demand at 1¼@2c for 66 degrees.

Nitric Acid of 42 degrees sells at 11@12; 36 degrees at 7¾@8.

Muriatic acid of 22 degrees may be had at 2¼@2¾c; 20 degrees at 2⅛@2½; 18 degrees at 2@2¼c in lots as wanted.

Muriate of tin is selling at 8 for single and 15@20c for double strength.

Muriate of antimony is jobbing at 8@9c.

Nitrate of iron is selling in single pkg lots at 3c for nitrate and 7c for true.

Copperas is jobbing at 1c per lb.

Tin crystals are not over plenty and command 18@20c.

Sulphate of copper jobbing at 7¾c.

Picric acid quoted at 40 to 47½c gold.

Aqua ammonia selling at 4½@7c.

Philadelphia Chemical Market.

Philadelphia, August 15, 1876.

We are pleased to report rather more activity in the chemical market and although the business transacted is no large, it is quite an improvement.

Bleaching Powders are selling as wanted for prime brands ex vessels at 1½c currency. To force a sale this price would have to be shaded. For future shipments 1⅝@1⅝c gold is wanted. Some makers will not sell at this.

Soda Ash, best brands 48 per cent carb. are held at 1.90 to 1.95 gold. The stock is very light. Importers look for a much improved demand from the glassmakers ere long. High test refined ash 2@2¼c gold, according to brand. Contracts can be bought within these limits. Sales of caustic ash at 1.90 gold.

Caustic Soda in fair demand at 4½c gold; prime brands 4.55; light stock; an invoice ex str might be done at 4.47½ gold cash.

Sal Soda steady at 1¼@1.35, according to quantity, spot or to arrive. Recent sales have been made at our figures here and to arrive.

Bicarb Soda, 4@4¼c gold for English. American 3¾@4¾c currency.

Arsenic in the Arts as a Cause of Arsenical Poison.

BY S. A. LATTIMORE, L.L.D.

Continued from last week.

After the execution of Tofana it is said an organized society was discovered in Rome whose object was the removal by poison of persons obnoxious to its members. The fortune-teller often added to her profession that of secret poisoner. She might confidently predict the early death of a person who stood in the way of her client, since the means of insuring the fulfilment of her prophecy were in her own hands. It was believed that the art of poisoning had reached such a degree of refinement that the death of the victim might be fixed at any future period by simply adjusting the potency of the poison. The history of Madame Brinvilliers of Paris, who was executed just two hundred years ago, is well known. She prepared herself for her future profession in a thoroughly scientific manner by studying the effects of Aqua Tofana and of *poudre de succession* upon the unsuspecting patients in the Paris hospitals. She then proceeded, *secundem artem*, to destroy her father, brothers, and many others.

Happily for society, toxicological science, by bringing to the light such secret practices, has made the existence of such monsters no longer possible-

Prices and Samples on Application,

In modern times, arsenic has passed from the hands of the assassin and become an article of widely extended use in the arts, especially those that minister to our taste for the beautiful. The quantity consumed annually is enormous, and is constantly increasing. New uses for it arise almost daily. It finds its way into every house hold. In view of its deleterious and often fatal effects, even in minute quantities, the freedom—rather the recklessness—with which it is placed in the hands of unsuspecting persons, is highly reprehensible, and should by some efficient means be checked.

Arsenic is not an abundant element in nature, but is most widely diffused. It is especially associated with many metallic ores. It occurs in small quantity in many mineral waters, especially alkaline and ferruginous waters, such as those in the valley of Vichy, Plombieres, Karlsbad and Kissingen, and to its presence has been attributed the therapeutic value of these waters. It is of common occurrence in iron pyrites, from which sulphuric acid is sometimes made; and thus this useful acid is often found arsenical to such a degree as to unfit it for certain uses. Thus, too, it passes into other products into which this acid enters, or in the preparation of which it has been employed. It has been detected even in carbonate of soda, which is obtained from common salt by means of sulphuric acid.

To be continued.

DYES.

NEW YORK, Tuesday Ev'g, Aug. 15.

There has been more doing, particularly by the dealers who are taking such stuffs as are used by the woolen mills. A feature in the market is the large arrival of cochineal, the last steamer from Aspinwall bringing some 1,600 ceroons Honduras.

There has been a good demand for black cochineal, but there was none in first hands and prices ruled very firm. There were sales of some 60 ceroons at 46@47c gold, and two lots of Mexicans 61 ceroons at 40@41c gold, held by the buyer at 42c gold. There will be a better supply when these late parcels are out of ship, but the market being bare will not probably be materially lower.

There was an advance in London for Bengal Indigo, and the market here was firmer with large sales reported, but we cannot trace them. We hear of only 50 chests Bengals and 60 ceroons Guatemala, the market closing strong but quiet.

Bichromate of Potash sold last week at 14¼c currency, and can now be had at 12⅞ gold, but many parties are firm at 15c currency. The stock of Scotch is very large. American is selling at 14½ @15c currency.

There is some enquiry for Persian berries, and sales were made in Boston.

Cutch is dull and flat generally, with few sales making.

Gambier is very slow of sale at 5⅜c gold.

Garancine is easy, jobbing at 10½@ 13c gold.

Turmeric sold to the extent of 194 bales on private terms, held at 5¼c gold

Chloride of Lime.

We take pleasure in calling the attention of the trade to the advertisement of Mr. Rosegrant in another column. Mr. R. is patentee of a simple method of packing this most valuable, though the cheapest, of disinfectants.

We have ourselves tested this packing and find it absolutely water-proof and air-tight. It will keep for any possible length of time, is at once valuable and economical.

The value of chlorine as a disinfectant is well known, and a method like this of utilizing this cheapest of all disinfectants is worthy of success.

—Wahl's Glue factory at Milwaukee was destroyed by fire last Thursday. Loss $35,000, insured for $25,000.

Public Notices.

NOTICE.—ALL PERSONS ARE HEREBY CAUTIONED against payments for my account to J. G. WILSON.

All persons indebted to me are hereby notified to make payment solely to C. DE P. FIELD, my attorney, No. 131 Water Street, New York, who will act as my agent for the sale of my manufactures for the States of New York and New Jersey.

A. POIRRIER, of Paris.

PAI WONDERFUL DISCOVERY

All who propose to paint should write INGERSOLL PAINT WORKS, 261 Front st., corner Dover st., New York. On receipt of postage-stamp they will send free their work on painting and selecting colors, with samples. They have ample evidence of its enduring twenty years. This is startling; yet the paint looks better, and is cheaper, than any first-class lead or zinc paint. All dealers should keep it.

WILLIAM O. ALLISON, Proprietor,
42 CEDAR STREET;

Edited by
WM. O. ALLISON,
N. C. WHITE,
A. G. SULLIVAN.

The above named gentlemen will represent the business interests of this paper.

MR. ALEX. HOLMES our travelling agent, is authorized to make collections.

Agent for Great Britain, Mr. Edward McFee, No. 5 Austin Friars, Old Broad Street, London, E. C., to whom all monies for our account may be paid.

Paris Agent of the OIL, PAINT AND DRUG REPORTER, H. MAHLER, 16 Rue de la Grange Bateliere, Paris, France.

WEDNESDAY, AUGUST 16, 1876.

Weekly Review.

Business is spasmodical, some days fair, while falling off altogether others, but there seems to be in volume about as much on the average as usual during the month of August, and there are many indications of a decided improvement in September. We hear of no failure of any note this week.

In the money market there is more ease than usual, and borrowers with good collaterals can get it at their own rates, which have been 1 per cent on Governments and 1½@2 per cent on other good securities.

The best commercial paper has sold at 3@4 per cent for 60@90 day bills; banks are willing to discount short time paper for good customers at 5 per cent.

Government bonds have been in moderate demand from home investors. The closing prices bid on Monday, where as follows:

U S 6s, 1881 reg	119¼
U S 6s, 1881, coupon	120¼
U S 5s, 1881, reg	117¼
U S 5s, 1881, coupon	117½
U S 5-20s, 1865, reg	115⅝
U S 5-20s, 1865, coupon	115⅝
U S 5-20s, '65, new reg	117⅝
U S 5-20s, '65, new coupon	117⅝
U S 5-20s, 1867, reg	119⅜
U S 5-20s, 1867, coupon	119⅜
U S 5-20s, 1868, reg	121
U S 5-20s, 1868, coupon	121
U S 10-40s reg	116½
U S 10-40s, coupon	119½
U S currency 6s	125⅞

Foreign exchange has been quiet. The following were the prices at the close on Monday:

Sterling, 60 days, nominal	$4 87½
Do sight, nominal	4 90
Do 60 days, actual	4 86¾
Do sight actual	4 89
Cable transfers	4 90 @4 91
Commercial sterling, prime long	4 85 @4 85½
Do do good	4 84½@4 85
Paris, Bankers, 60 days	5.16⅞@5 15⅝
" sight	5 15 @5.13¾
Antwerp, bankers, 60 days	5 17½@5.15
sight	5 13¾@5 12½
Swiss, bankers, 60 days	5 16¼@5 15
Do sight	5 12½@5 11¼
Reichsmarks, (4), bankers, 60 days	94⅞@ 95⅛
Do sight	95⅝@ 95⅞
Guilders' bankers, 60 days	40⅝@ 40⅞
Do sight	40⅝@ 40⅞

Gold has been easier during the week as follows: Tuesday 111¾@111⅞; Wednesday 111¾@111⅞; Thursday 111¼@111¾; Friday 111⅜@111½; Saturday 111½@111⅝; Monday 111⅜@111½.

WITHDRAWALS FROM BOND.

WEEK ENDING AUG. 14.

Fulton Street Improvements.

Fulton street has almost as distinct and well marked an individuality as that possessed by Wall street itself. Eliminate from the trade of the street the retail element, which is calculated on its character as a thoroughfare and on the daily needs of passers-by, and we find it is largely devoted to the traffic in oils, paints, brushes and drawing and artists' materials generally, and is rapidly becoming, if it cannot already claim to be the headquarters of that important branch of trade.

There has been, for a long time, a very apparent tendency towards a concentration of the different sorts of traffic, in New York, in certain neighborhoods, and for a long time this tendency has seemed to operate to the carrying of almost all kinds of wholesale trade to the west side of Broadway.

Thus twenty-five years ago Pearl street was filled with the large dry goods houses, which—or their successors—are now to be found as far west as West Broadway and New Church streets. Much of the iron trade and almost the whole of the hardware trade (properly so-called) has followed suit, and the same might be said of other branches of commerce.

The trade in paints and kindred articles might have come into the same category had it not been for one or two circumstances which have, perhaps, had less effect on the other trades named. Until quite recently there has been no appearance of anything like a concentration of the paint and brush trade in any neighborhood, and some three or four years ago one or two houses made a move for the west side of town; but the movement did not become general, and the fact that several of the heaviest houses have since purchased or built stores on Fulton street, seems to indicate that the trade will, at least for many years to come, stay east of Broadway; in fact it is reported that some of those who have "gone west" are desirous of returning. The east side is said to be more convenient and this, coupled with the fact that the drug trade seems to be fixed there, helps to confirm the idea that the dealers in paints will not soon leave Fulton street.

Within the period named many improvements have been made in the street, among which none has been more worthy of notice, or more important to the trade of the street, than that effected on the corner of Fulton and William streets—the "Old Dutch Church Corner," as it was called. One does not need to have been long a resident of New York to remember the square-towered, ugly, quaint old church which stood there, which was so familiar to even the most careless passers-by as the scene of the "Noon-Day Prayer Meeting," so plainly advertised by its exceedingly business-like sign. It was in truth a venerable landmark in our history, was the old church, for its corner-stone was laid in 1767, and the building completed two years later, at a cost of $30,000—a large sum in those days. It saw many things and suffered much in the hundred and six years it stood, and was closely linked with the most troublous times of New York's history. Throughout the British occupancy of the city, during the Revolutionary War, it was used as both an hospital and a prison, and it is on record that many of the patriot prisoners contrived to escape from there by tunnelling Fulton street—then narrower than now—and emerging in the basement of the building opposite.

On the site of the old church now stands the extensive warehouse and counting-room of Messrs. F. W. Devoe & Co., so well known as a leading house in the manufacture and sale of paints and colors, brushes, canvas, and artists' materials. The present firm was organized in 1864, although the senior partner, Mr. F. W. Devoe, began business in 1845, and has been in Fulton street since 1854. The present firm consists of Messrs. Fredrick W. Devoe, James F. Drummond, Fredrick Saunders, Jr., and J. Seaver Page. Their store is one of the most attractive, not only in Fulton street but in the city, and their show windows draw "crowded sidewalks" at all hours of the day. And in truth these windows are well worth studying by any one. One of them, representing the interior of an ideal studio, a charming picture, was arranged by Mr. Drummond, and has already been described in our columns; another shows the different pigments in their crude state, the metallic and other bases from which paints are manufactured, as well as the various colors and mixed paints ready for use. This was arranged by Mr. Saunders, and affords an excellent study besides being artistically attractive. In the other windows are shown samples of the different sorts of brushes in use by painters and artists in colors of all kinds, the firm making every kind of brush, from the daintiest "pencil" to the heaviest used in house painting. The factory of this firm is situated on Horatio street, running through to Jane street. It is one of the most complete of its kind in the world, and the colors here made, whether oil or water, for artists' use or for the heaviest of exterior painting, are unsurpassed.

Immediately opposite the new building is the store No. 102 Fulton, occupied since December last by Messrs. Miles Bros. & Co., manufacturers, importers and dealers in brushes. The existence of this house dates back some forty years, when it was first formed by Mr. W. H. Miles, sr., who successively carried on the manufacture and sale of brushes at Philadelphia, Cincinnati and Lansingburgh. Finally, however, he opened business in this city, where for the past twenty-two years the house has been located, the firm style for some years past being Miles Bros. & Co. For seventeen years the firm occupied one store in John street, and at the expiration of that period removed to No. 56 Fulton street; thence, after a few years, to more commodious lofts at No 66, and in December last to the spacious store No. 102, where their salesroom occupies the first floor. The front part of the present store has been provided with a retail department. Messrs. Miles Bros. & Co. manufacture or import all classes of brushes, but make a specialty of varnish, kalsomine and artists' lines, having only recently taken up toilet and house brushes. They have, during the past three years, made a specialty of camel's hair brushes for carriage painters and cabinet makers, which they fully guarantee. A prominent article in their list is, also, shaving brushes, made under their patent issued in 1871. The improvement consists in a wooden handle turned from one piece and japanned, the hair being fastened in by a wooden plug, and being entirely unaffected by any amount of soaking in water or alcohol. The firm's factories are on Atlantic avenue, Brooklyn.

A few doors higher up the street on the same side is the large building Nos. 106 and 108, occupied wholly by Messrs. C. T. Raynolds & Co. With the history of this house is interwoven much of historic interest. It traces its foundation back to 1770, when one Wm. Post began business as a dealer in paints and painters' materials at the corner of Fletcher and Water streets in a small frame building which also served the purposes of a dwelling. During the revolutionary war the business seems, to have been interrupted, but after peace was established Mr. Post resumed the business to which, in 1801, his sons were introduced and the firm became Wm Post & Sons. The firm prospered and was succeeded in 1838 by Mr. Francis Butler, a trusty clerk, with whom Mr. C. T. Raynolds began his career as apprentice. In 1850 the firm was Butler & Raynolds, and a year after the later gentleman became head of the house through the death of Mr. Butler. The business had been several times removed, meanwhile, to accommodate its rapidly increasing proportions, and the business which for many years past has been conducted by Messrs. C. T. Raynolds, T. B. Hidden, Leonard Richardson, E. L. Molineux, and Aquila Rich, under the firm name of C. T. Raynolds & Co., is of a magnitude so conspicuous that it scarcely needs description. The firm has large factories in Brooklyn for the manufacture of paints, whiting and putty, and in New Jersey for the manufacture of varnishes and colors. The products of the firm include all of the heavier colors, white lead, ready mixed paints, coach colors and varnishes, and fine oil and water colors, and tube colors for artists. They are also manufacturers, importers and dealers in artists' and painters' materials, paper makers' colors, japans, shellacs, spirits and painters' cutlery. Indeed, there is nothing required by the painter or in the line of paints, or by the artist or decorator or gilder, that is not furnished by this great house of a century's growth.

At 115 Fulton street, Messrs. J. M.C. Martin & Son carry on a very extensive business in brushes. The concern was started in 1830 by the senior member of the present firm, at No. 117 Greenwich street, where he resided until 1838, when he removed to Division street, and thence in 1852 to No. 118 Fulton street. About ten years later the business was removed to No. 115 Fulton street, which was deserted in May last for the newly erected and more pretentious store No. 107. The firm manufactures full lines of brushes of all descriptions and of the best qualities. The display in its show window is a most artistic arrangement of these art utensils, and attracts much attention from passers-by.

Messrs. Harrison Bros & Co. removed to their present store, No. 115 Fulton street in May last from No. 179 Water street, where they had been for many years. The parent house is located at Philadelphia, and the two offices are connected by a private telegraph line 125 miles in length. With one exception they are the oldest corroders of white lead in this country, they having been engaged in that business since 1806. They are also among the largest oxydizers of lead,

and manufacturers of the oxides and of all colors, as well as of the principal chemicals, including sulphuric, muriatic and acetic acids and alum. They claim that, being manufacturers of the bases of colors, which many competitors have to purchase, they enjoy special advantages in the manufacture of paints. Their "Town and Country" ready mixed paints have a wide popularity. Their display at the Centennial is spoken of as being specially meritorious and attractive.

Messrs. Keuffel & Esser, at No. 111 Fulton street, are manufacturers and importers of every description of artists' draughtsmens' and surveyors' tools and materials. This firm has been in business here for about ten years, and for seven years has been in Fulton street. Messrs. Keuffel & Esser have large factories in New Jersey, and also import many of the mechanical contrivances, drawing papers and other fine materials that are not made on this side of the Atlantic.

So numerous a collection of prominent houses in the paint and color, brush and other kindred branches in the limited space of half a block, warrants the belief, we think, that Fulton street may be fairly reckoned the centre of those trades. And yet there are several other houses in the same line of goods at other points; notably among these being Messrs. Schneider, Bell & Co., No. 60 Fulton street, who are largely engaged in the manufacture and sale of Paris green, blanc fix, satin white, and sulphates of zinc and copper.

Messrs. D. Steiner & Co., No. 97 Fulton street, are also heavy dealers in magnesia, Paris, satin, meadow and chrome greens, chrome yellows, China and Prussian blues, and other colors, dry, in oil and pulp.

Mr. A. V. Benoit, at No. 148, manufactures and imports all classes of tools, materials and colors for artists, architects, surveyors and wax-flower makers, and across Broadway at No. 176, Messr. Anderson, Pierce & Co., carry on their extensive business as manufacturers and importers of paints and colors of all descriptions.

Mr. F. J. Kaldenberg, manufacturer of meerschaum, amber, ivory, tortoise shell and pearl goods moved to No. 117 Fulton street, in May last, from the stores Nos. 4 and 6 John street, which he had occupied since 1861. He occupies at present two entire buildings, Nos. 117 Fulton and 44 Ann street, the rears being connected. The variety and extent of his meerschaum, amber and shell work, are not to be described in the narrow limits of an article of this sort, and must be seen to be half appreciated. He not only manufactures pipes, cigar and cigarette holders of every conceivable design, but is very extensively engaged on ivory and shell umbrella handles, amber jewelry, and is also an importer of fine tobaccos and cigarettes. His display at the Centennial is at P. 66, centre of South avenue, a "Trophy" space being allotted him in view of the excellence of his exhibit. The monk's head pipe, so familiar an object in his window, is valued at $500. His wholesale trade is very largely with druggists who handle smokers' goods.

Glass Making by a New Process.

Several months since our attention was called to a specimen of "slag," from one of our iron smelting furnaces which, by having been subjected while fused to a jet of steam, was reduced to a translucent fibre resembling cotton. It struck us at the time as being an imperfect glass. Now, among the inventions and improvements of which this age is so prolific, and which crowd so fast upon us that it is difficult to record them all, we have to record a patent taken out in England by Bashley Britten for a new process by which the recrement or "slag" of iron works can be used in the manufacture of glass and vitreous materials. The object is not to produce a finer kind of glass, but to economize about two-thirds in the cost of production—first, in the saving of a large amount of fuel by using "slag" in its hot or molten state; second, in the economizing of labor; third, in having a large part of the material of glass, which exists in the iron stag at a nominal price. This will be seen by the following analysis of the average composition of Blast furnace slag:

Silica	39 per cent.
Lime	34 "
Alumina	14.50 "
Magnesia	7 "
Oxide of iron	1.50 "
" " manganese	1.50 "
Potash	1.50 "
Sulphate of calcium	1 "
	100.

It is seen by the above that this "slag" contains no ingredient which is not found in the ordinary glass of commerce, lacking only the relative proportions. For instance, there is an excess of lime; the proportion of silica or sand is wanting. It needs only to add the necessary proportions of silica and alkali in some form to make a glass of good color, acid proof, will cut with a diamond, and take the coloring materials used for the various shades. If 50 per cent of slag can be used in the making of glass, and a large proportion of the cost of manufacture, which is represented by the fuel used, can be saved by utilizing the slag in a molten state, it will at once be seen how valuable and important is this invention. This patented process of Mr. Britten's for converting hot slag into glass has been tested for the last 18 months in England by a committee of practical and scientific gentlemen, who have recently perchased the English patent.

We hope in the future, when time and space will permit to give a more complete description of this new process, and to furnish the figures and analyses by which all interested in the subject will gain a full insight into the advantages of utilizing this hitherto useless material. It promises a large and profitable field for the investment of capital and the development of manufacturing enterprise. We will add that the process of Mr. Britten has been patented in this country and that its management here is in the hands of Messrs. H. J. Baker & Bro., of our city, who are authorized to make contracts and will cheerfully afford any further information desired.

Foreign Chemicals and Colors at the Centennial.

RUNCORN CO.

In this country the goods of this firm are better known as "Johnson's" and among some consumers their goods are considered superior to any other makers'. Johnson's caustic soda ash usually brings the highest price of any except perhaps one brand, though this is no doubt largely due to the management of the importer. Johnson's bleaching powders are a standard brand, and their value is a good criterion of the market for this article; at times it has taken the downward lead in prices, but this has been owing entirely to a competition to sell among those having it on commission. They exhibit two samples of 98 per cent sulphate of soda, which are interesting, inasmuch as one sample is composed of small yellowish lumps obtained by the old process, while the other is of handsome large white lumps, and obtained by Hargreave's patent process, which we presume is owned and used by the Runcorn Co. There was one jar in their case which contained a light straw colored substance which we took for refined rosin; we had never seen such before, and do not think it common in this country; as nearly as we could tell, seeing it from a distance of several feet, it was a liquid very like rosin oil, only lighter in color. There was another jar which had no label on, which probably was the same in another state. A glass jar contained 58 per cent soda ash, and one 39 per cent bleach, which seemed whiter than any other sample exhibited. They showed samples of cream, and white 60 per cent caustic soda, but we never hear of their brand in our market, nor of their soda crystals, of which they show a sample; these also absorbed water.

JOHN MACKAY.

This exhibit is contained in a tall and handsome case, in the bottom of which is a panel inlaid with finely polished woods of various colors. Samples of different Gums are shown, viz, benzole, damar, orange shellac, mastic, sandarac and bleached shellac. Below these in long bottles with names of contents decorated in gilt are shown samples of brown, black and white varnishes made from these gums. There is also shown spirit varnishes and polishes for coating woods of various colors. They are located at Edinburgh, Scotland.

CHARLES TURNER & SON.

This firm exhibit consists of gums, varnishes and fine colors, and on a paneled board is shown a number of different wood stains. They also show aniline colors of beautiful shades. Varnishes of different quality are exhibited and lumps of gums from which the different kinds of varnishes are made. Samples of dry colors, including flake white, deep and pale vermilion, scarlet, madder, drop green, violet lake, chrome yellow, green: and a variety of different colored pigments. This firm is also known as the St. Georges Color Works, and are located at London, England.

New Inventions.

(Specifications furnished for 50 cents.)

IMPROVEMENT IN PROCESSES FOR OBTAINING ISINGLASS.

The object of my invention is to obtain from the skins of salt fish a marketable article of isinglass; and my invention consists in certain steps of a nature to constitute a process, as hereinafter more fully set forth and claimed.

After the skins are stripped I soak them in fresh water long enough to remove all the salt. I then dry them without removing the scales. After they are dried I boil them thoroughly, and carefully strain the liquid off in tanks where all the impurities will settle to the bottom, and the whole will, after proper evaporation, become a solid mass. It is then taken from the tanks, the impurities are cut from the pure mass, which is then cut into thin slices and dried or melted, and spread on a smooth surface to dry. When it is set it is transferred to twine or wire netting, where it is thoroughly and completely dried, and is ready to be packed for market.

Business Changes.

DRUGS.

New York City.—C G Buckholtz has given a mortgage for $350.

Charles Fessler is said to have left town.

Albany, N. Y.—L V O Ham has given a mortgage for $86 55.

Owego.—H D Pinney & Son have failed.

Wetumka, Ala.—Moore & Cain have separated, and E M Cain is going it alone.

Groton, Conn.—James L Weaver has left the business.

Dawson, Ga.—Cheatham & Son have concluded to give up the drug business.

O'Fallon, Ills.—D. C. Dunn & Co. have done the right thing in selling out to L. Hibbard.

Lima, Ind.—Shepard & Searing have gone and dissolved.

Wawaka.—William Roberts has sold out.

Topeka, Kan.—L. Keyser has disposed of his stock to A. Barsett.

Boston, Mass.—Henry T. Knight is dead.

Salem.—Charles H. Stentiford has added a $600 mortgage to his stock.

Worcester.—Estate of M. S. McConville have sold the drug business to J. F. Knowlton.

Rochester, Minn—John H. Hill has drawn up a mortgage for $1400.

Anliville, Mo—Jones & Avitt have dissolved, and J. W. Avitt is going it alone.

Attica, O—Israel Roop has sold out.

Cincinnati—T. Brodhagen has kindly made an assignment.

Elderton, Pa—J. J. Pontius has failed.

Fredericksburg—A. S. Smith has given a mortgage for $1000.

Nashville, Tenn — R. P. Jenkins is dead.

PAINTS.

Rochester, N. Y—W. A. Banning is dead.

Dawson, Ga—J. B. Averet has hung up his brushes and left the paint business.

Boston, Mass—John Porter & Co have gone and failed.

St. Paul, Minn—Roberts & Bozelle have dissolved.

Phila, Pa—B. U. Hollenbeck & Son have dissolved, and B. F. Hollenbeck is alone.

OILS.

Buffalo, N. Y.—Warren H. Case has given a mortgage for $28 24.

Pittsburgh, Pa.—J C Kirkpatrick & Co. have sold out to the Standard Oil Co.

Wormser, Myers, & Co. have done the same.

SOAP.

Lawrence, Mass.—L Beach & Son have changed style to Beach Soap Co. Success to them.

Muskegon, Mich.—E Haight has made an assignment.

GLUE.

New York City.—Marcus Bros. & Co. have dissolved; new firm under same style.

Williamsport, Pa.—J. Battles & Co. have dissolved; new firm under same style.

VARNISHES.

Chicago, Ills.—Elmendorf, Van Ness & Treat have dissolved and Elmendorf & Treat are running the machine.

Boston, Mass.—Tucker, Hiram & Co. are going into bankruptcy, not of their own volition either.

Chas. E. Burbank has failed.

SPECIAL NOTICES.

BRUSHES.

BRADLEY & SMITH, 251 Pearl Street.

SURGICAL INSTRUMENTS.

IMPORTATIONS FOR THE WEEK.

All parties desiring their names published in the Imports, will oblige by sending memorandum of goods to this Office.

ACID BORACIC—3 cks, 4028 lbs, Hammill & Gillespie, per Germanic, Liverpool.
" CARBOLIC—8 cs, 530 lbs, C Pfizer & Co, per Donau, Bremen.
" " 4 cks, 2240 lbs, Marx & Rawolle, per The Queen, Liverpool.
" " 166 pkgs, per Liverpool, London.
" ROSOLIC—2 cks, 830 lbs, J P Barnet, per Germanic, Liverpool.
ALOES—7 cs, 2981 lbs, Reed & Co, per Denmark, London.
ALUM—150 cs, 48600 lbs, Wm Pickhardt & K, per Olbers, Bremen.
" CAKE—25 cks, 34544 lbs, W I Clark, per Hindoo, Hull.
AMMONIA MURI—8 cks, M Lefferts, Jr, per Arragon, Bristol.
ANILINE COLORS—11 pkgs, 1000 lbs, R D Jackson, per Germanic, Liverpool.
" " 3 cs, 160 lbs, Lutz & Movius, per Hammonia, Hamburg.
" " 12 cs, 1100 lbs, Geisenheimer & Co, per Donau, Bremen.
" " 4 cs, 200 lbs, Lutz & Movius, per Hammonia, Hamburg.
" " 12 cs, 1000 lbs, Geisenheimer & Co, per Hammonia, Hamburg
" " 2 cs, 100 lbs, Lutz & Movius, per Germanic, Liverpool.
" " 1 cs, 50 lbs, Lutz & Movius, per Hammonia, Hamburg.
ANNATTO SEED—3 bbls, 1616 lbs, Burdett & Pond, per John Bramall, Para.
" " 30 bbls, 4838 lbs, per John Bramall, Para.
ARGOLS—68 cks, 68090 lbs, J G Dreyfus & Co, per Germanic, Liverpool.
" 5 cks, 5483 lbs, per Germanic, Liverpool.
" 4 cks, 3061 lbs, per Abyssinia, Liverpool.
" 27 cks, 9635 lbs, French Cream Tartar Co, per The Queen, Liverpool.
" 19 cks, 8669 lbs, per The Queen, Liverpool.
" 10 cks, 11158 lbs, Recknagel & Co, per The Queen, Liverpool.
" 22 cks, 17417 lbs, per Spain, Liverpool.
" 20 cks, 20441 lbs, Peters & Tiemann, per Spain, Liverpool.
ARROWROOT—4 cs, per Denmark, London.
ARNICA FLOWERS—10 bales, 2210 lbs, Lanman & Kemp, per Hammonia, Hamburg.
BARK MEDICINAL—5 bales, 1192 lbs, per Denmark, London.
BARYTES—265 bbls, 228480 lbs, E Hill, per Germanic, Liverpool.
BAY RUM—10 cks, 1159 gals, Allen & Co, per J Bramall, St Johns.
BLEACH—61 cks, 56823 lbs, per Hindoo, Hull.
" 129 cks, 124850 lbs, E Hill, per Germanic, Liverpool.
" 171 pkgs, 180544 lbs, J L & D S Riker, per The Queen, Liverpool.
" 64 cks, 55886 lbs, per Celtic, Liverpool.
BONE BLACK—3 cks, per Hammonia, Hamburg.
BRONZE POWDER—5 cs, J Marsching & Co, per Donau, Bremen.
CANARY SEED—28 bags, 4592 lbs, E N & J B Lawrence, per Rhein, Bremen.
CANTHARIDES—1 bbl, 560 lbs, Lanman & Kemp, per Hammonia, Hamburg.
CARAWAY SEED—50 bags, 5500 lbs, Levy & Levis per P Caland, Rotterdam.
" " 200 bags, 22500 lbs, C C Abel & Co, per P Caland, Rotterdam.
CARDAMONS—5 cs, per Denmark, London.
" 9 cs, 1021 lbs, Hatry & Fischer, per Denmark, London.
" 4 cs, 660 lbs, per Denmark, London.
CHALK—200 tons, per Liverpool, London.
CHAMOMILES—10 bales, 2210 lbs, Lanman & Kemp, per Hammonia, Hamburg.
" 35 bales, 7827 lbs, per Hammonia, Hamburg.
" 3 cks, 500 lbs, Arnson & Wilzinski, per Hammonia, Hamburg.
CHINA CLAY—100 cks, 50 tons, J Lee Smith & Co, per Hindoo, Hull.
CHLORAL HYDRATE—5 cs, 500 lbs, Paine, Schering & G, per Suevia, Hamburg.

4 cs, per Sea Bird, for Puerto Cabello.

WHALE OIL.
1 bbl, per R W Griffiths, for Cienfuegos.

LONDON MARKET REPORT.

LONDON, July 29, 1876.

Cochineal is steady, with a fair demand. Full prices were paid at the public auctions last week, the general character of the portion sold being indifferent. Of 600 bags offered, all Teneriffe except 30 bags Lima, about half sold, silver at 1s 9d to 1s 10d, and black at 1s 9d to 2s, and Lima silver at 1s 7d to 1s 9d for ordinary to good. Honduras scarce, our total stock of that description being 500 bags against close upon 2000. The deliveries are moderate and are only 400 bags during the past fortnight.

Dyestuffs—Argols: 9 bags fair white Cape rather dusty, sold at 85s to 87s 6d. Cream of tartar has improved from the recent depression, the make has been small, the low prices leaving a loss so that the principal holders were firm, and the present quotation is about 90s free on board at Marseilles. Cutch is cheaper, fine old Elephant sells in small lines at 26s, but by auction 1200 boxes of good quality new make sold at 23s 3d to 23s 6d. Gambier is also quiet and easier, good block, 20s 6d to 20s 9d closing sellers; for arrival there has been an enquiry at former prices, but not much done. Galls: Turkey firm, with a small stock of desirable quality, fine blues 50s to 52s 6d. China quiet, fair quality rather broken sold at 54s. Orchella Weed is in steady demand at about 29s for California, which at that price is preferred to other qualities. Safflower, quiet; a small parcel Bengal sold by auction at 38s to 70s for common to middling, and privately good quality is selling slowly at £4 5s to £4 10s. Turmeric is firm; a fair business has been done in Bengal at 22s 6d on the spot, and 20s to 21s for July-August shipment by steamer. Madras, good finger 21s and Cochin split bulbs 11s to 12s.

Dyewoods—Log; Jamaica quiet, with sales of fair quality at £5 10s. Fustic; a small parcel of Jamaica sold at £5 5s to £5 12s 6d.

Indigo—East India accounts of the crop continue to be most unfavorable, and state that the out-turn will be short of an average, say from 70,000 to 80,000 maunds, though it is of course still too early to form any precise opinion. The above, and the general favorable statistical position of the article induced an active speculative demand and since the close of the last quarterly sales fully 1000 chests have changed hands, values improving 2d to 3d per pound all round. The market is very firm and more could have been placed, only that many holders have withdrawn their stocks. South American; the periodical sales only amounted to 720 packages, for which there was a good competition 560 packages sold at 2d to 3d advance. Good American 4s to 4s 6d.

Drugs—Aloes steady; 13 cases Cape sold at 37s 6d to 45s for dark drossy and soft to good. No East India or Barbadoes offered. Ambergris; one small tin middling grey and dark mixed sold at 38s. Balsam—Capivi; very dull, a few barrels of good Maranham sold at 2s to 2s 2d; 40 cases Peru bought in at 5s 3d to 6s, and some Tolu at 11s to 11s 6d. Bark—Yellow; quiet, and only a few packages of low and common quality sold at 10d to 1s 6d; 1000 packages soft Columbian were partly sold at from 1s to 2s 5d for common to fine. Crown, 100 packages sold from 5d to 3s for common broken to fine. Cascarilla, 100 sacks sold at 16s to 17s middling quality, woody.

A New Mercantile Bureau.

Several months since a number of New York merchants concluding that something must be done in order that this commercial centre might recover the trade they had lost through the unjust discriminations of railroad companies, and from many other causes, began to discuss the best means to obtain the desired result. After many informal meetings, and not a little discussion, the matter is now shaping itself into method, and the N. Y. Mercantile Bureau was organized last week. Its object is "the promotion of the trade of the metropolis with the interior towns and villages of the country. R. F. Austin was elected President, and H. K. Thurber Treasurer; J. D. Treadwell, Secretary and Manager. The office of the Bureau is at 291 Broadway. A circular has been issued stating the object of the Bureau and committees appointed.

Drug, Chemical and Pharmaceutical Notes.

EDITED BY N. C. WHITE.

SALICIN AND SALICYLIC ACID IN RHEUMATISM.

Dr. Maclagan, in the *British Med. Jour.*, thus compares the merits of the two substances as remedies for rheumatism:

As I am probably the only person who has experience of both salicin and salicylic acid in the treatment of acute rheumatism, perhaps I may be allowed space for a few remarks on the merits of these two remedies.

Which is the better remedy, salicin or salicylic acid? That each exercises a marvelous influence in cutting short an attack of acute rheumatism, there can be no doubt. I have used salicin or salicylic acid in every case of acute rheumatism which has come under my care since November, 1874 (a year and a half), and invariably with the same result—a rapid cure of the disease. Seeing a patient suffering from acute rheumatism, I have no hesitation in assuring him that within fourty-eight hours, possibly within twenty-four, he will be free from pain. That is a very different tale from any that can be told in connection with any other remedy.

Salicin is the remedy which I used first, but I have not confined myself to it. When salicylic acid was first recommended as a febrifuge, I determined to give it a trial in acute rheumatism. In the first case in which I used it, ten grains were ordered every two hours. On seeing the patient after four doses had been taken, the general condition was a little better, but she complained much of the medicine "burning her throat." I urged her to continue it. This she did, and on the following morning the pain was less, and the temperature had fallen from 102.3 to 101.1; but to the burning sensation in the throat was now added sickness. I omitted the salicylic acid, and gave the same dose of salicin, ten grains every two hours. The sickness ceased; the burning sensation in the throat disappeared; and by the following day the pain was entirely gone from the joints, and the temperature had fallen to 98.8. She made a good recovery.

This case well exemplifies what is the chief objection to salicylic acid—its tendency to produce irritation of the throat and stomach. I may have been unfortunate in my experience, but in every case in which I have given it, this irritation has been complained of. All writers on the subject agree in referring to this irritation as one of its unpleasant effects. The salicylate of soda seems to give rise to the same disagreeable symptom. Salicin, on the other hand, never gives rise to any unpleasant effects. I have prescribed it within the last year and a half in many different ailments, in doses ranging from five to thirty grains. I am probably within the mark when I say that I have thus given it to at least a hundred different people, and I cannot recall a single instance in which any disagreeable effect was produced.

I have myself taken (by way of experiment) three doses of sixty grains—one in the forenoon, one in the afternoon, and one at night—without experiencing the least discomfort; but the smallest pinch of salicylic acid produces in me a feeling of heat and irritation in the throat, while a dose of ten grains gives rise to gastric irritation and a most upleasant burning sensation in the fauces.

Salicin is a pleasant bitter, and is given mixed with a little water flavored with syrup of orange if desired. In adequate doses, say fifteen grains every two hours, it cuts short an attack of rheumatic fever, without producing disagreeable effects. It should be continued in smaller doses during the first fortnight of convalescence.

As remedial agents in acute rheumatism, salicin and salicylic acid seem to be equally efficacious; but the former has the advantage of producing no unpleasant effects. In time, too, it is sure to be much cheaper, a matter of some importance with a large class of sufferers from rheumatism.

SOME NOTES ON ANILINE-BLACK.

BY S. CABOT, JUN.

There has been much discussion, in late years, upon the subject of aniline black, both as to its technical application, and with regard to its chemical properties and formula.

My experiments upon the latter part of the subject lead me to believe that, as ordinarily seen upon cloth, aniline black consists of a salt, or perhaps a mixture of salts, of a number of organic acids of a red color combined with a base of a greenish color.

This base I believe to be quite similar to rosanilin in its chemical constitution, but not so strong a base. Like rosanilin, however, it contains (if freed from the acids mentioned above), I believe, *no* oxygen. It can combine weakly with mineral acids, and I may at some future time be able to discover its atomicity through means of this fact.

The red and purple-colored acids, on the other hand, appear to be oxidised products; some of them, like indigo, may be reduced by the action of grape sugar and alkali, and are *reoxidised* by contact with the air.

In the ordinary methods of making aniline black, *i. e.*, by the action of chloric acid upon aniline oil, large quantities of ammonia salts are found which remain in the filtrate, as may be easily seen by boiling the same an with alkali. This fact proves distinctly that the black itself must contain less nitrogen and less hydrogen than the aniline from which it is made.

And now with regard to the practical part. It has long been a great "desideratum" to obtain a *steam* aniline black that was sufficiently good and cheap, and did no injury to the fibre. Many printers, knowing that acetic acid was a volatile acid, and not of great use in steam colors, have attempted to substitute it for other acids in the printing of this black, with *absolutely* negative results. I have shown by experiment that the cause of this ill success is the formation of *acetanilide*, upon which the oxidizing agents have not the effect desired. I believe in the case of the use of tartaric acid the same difficulty is sometimes to be experienced through the formation of a similar compound in which one of the hydrogen atoms of the aniline is replaced by the acid radicle or tartaric acid. Where chlorate of potash is used, however, this tendency is partly counteracted by the great tendency to form the insoluble bitartrate of potash.

The only steam aniline blacks that appear as yet to have any great technical value are those made with ferro- or ferridcyanide of aniline in connection with a chlorate.

The great step which should next be made in the preparation of this color, is the introduction of the use of more soluble chlorates than that of potash—for instance, that of soda. Much inconvenience would thus be avoided, from crystallization of the chlorate of potash in the color while printing and the consequent destruction of both "doctors" and "rollers." It would also render possible the use of much stronger solutions of chlorate, which will be of great use in steam colors.—*American Chemist.*

PHARMACEUTICAL PREPARATIONS OF PHOSPHORUS.

[A paper read at the last annual meeting of the Am. Phar. Ass'n.]

BY GEORGE W. SLOAN.

QUERY 7.—Phosphoretted resin, by A. W. Gerrard, has been introduced as an eligible mode of administering phosphorus in a pilular form; can an agreeable emulsion be prepared from it or a desirable liquid preparation?

Having accepted the above query, I prepared the phosphoretted resin following the process of Dr. A. W. Gerrard, as published in the Am. Jour. of Pharmacy, for January, 1874. In reply to the query, I would say that glyconin serves as a very nice vehicle for the resin, and holds it thoroughly suspended. Finding some difficulty in suspending the large amount of resin with gum, in the form of an emulsion, I endeavored to make a stronger form of phosphoretted resin; and, borrowing the idea from one whose name I do not remember, I adopted the following: Take a wedgwood mortar of say eight ounces capacity; put into one ounce of water; set upon a sand-bath; weigh ten (10) grains phosphorus, and drop into the water; in a few minutes it will have fused; weigh ninety (90) grains clear resin, drop it also into the water, and, when it has become sufficiently softened, incorporate the fused phosphorus with it, using a warm pestle, and being careful to keep the mass under the water. When thoroughly incorporated, or when the resin has taken up the phosphorus, remove from the water with a spatula, and lay upon a tile, or something which the soft resin will not adhere to; in a moment it will have become hard and brittle, and may be rubbed into a powder, although my preference is to keep it in pieces in a close-stoppered bottle. This contains ten per cent of phosphorus, and may be triturated into a powder with sugar of milk, into an emulsion with sugar and gum, and readily forms pills with the various extracts and other medicines, and contains such a small proportion of resin as to greatly remove the objection to the use of the resin, viz: its insolubility. This mode of preparation has for its recommendation the fact of its safety, and may with ordinary care be conducted by any pharmacist without endangering either his person or property.

Mr. W. H. Wickham, in the June No. of *Drug Cir. and Chem. Gazette*, has very ably indicated the superiority of "gelatin-coated pills," both in regard to their solubility of the coating and their facility of assimilation. The gelatin-coated pills are not kiln-dried as in the case of sugar-coated, nor subjected to immense pressure as in the case of compressed. He points out the unreliability of the tests to which the advocates of other pills resorted, and sugests that his experiments, simple and practical, are within the reach of all. "Let any one, desiring to prove this matter to his own satisfaction, take a two grain gelatin-coated pill in his mouth, and keep moving it about between his tongue and roof of his mouth with gentle pressure; in half a minute the bitter taste is preceptible, and one or two minutes the coating is dissolved, and the mass exposed." The writer has experimented in this way with more than fifty gelatine coated pills, manufactured by the firm of which he is a member, and in no instance was the gelatine over two minutes in dissolving. So that the easily dissolved yet perfectly covering gelatine, the spheroidal shape and the readily assimilable condition of the mass when the coating is removed, are all advantages of the uncoated, sugar coated and compressed gelatin-coated pills have "out-lived the period of fashionable novelty" and become deservedly popular with physicians and patients on account of efficiency, reliability, and the facility with which they may be swallowed; and, although, infallibility, which is incompatable with anything human, is not claimed, still any sweeping charge against them should be scrutinized for the animus of self-interest and answered by practical tests.

PLATINUM APPARATUS.

The great exposition has brought out some facts regarding the nature and extent of our manufactures which will be new, not only to our foreign visitors, but to a large nnmber of our own citizens. It is shown by the exhibits that fabrics, machines, apparatus, etc., are produced here in large quantities and in great perfection, which were supposed to be produced only in the older countries of Europe. In looking about the building we were surprised to find a case containing a large and excellent assortment of platinum vessels and implements, adapted to the wants of the chemist. From the attendants we learned that these platinum wares were made in Sugartown, Chester County, Penn., by Mr. J. Bishop. A careful inspection of these articles showed that they compared favorably with those made in Paris or London. It was indeed a surprise to learn that such a manufactory had been established in an obscure town in Pennsylvania, and that we need no longer order the indispensable tools of the chemist from abroad.

Platinum is a rare and expensive metal, and very difficult to manipulate or work into desired forms. When it is understood that the heat of our fiercest furnaces fail to fuse the metal, and that its manipulation is accomplished only by the aid of the oxyhydrogen flame, some of the difficulties involved in forming it into capsules, retorts, etc., are comprehended. We have visited the workshop of the largest platinum manufacturer in Paris, and were exceedingly interested in watching the processes. It is a pleasure to know that the wants of chemists can be fully met by platinum wares supplied by American artisans. —*Jour. of Chem.*

SALICYLIC COTTON.

In the antiseptic treatment of wounds, cotton, impregnated with salicylic acid, has for some time been employed instead of Lister's preparations. For this purpose, clean white cotton, previously deprived of oil by means of soda, and afterwards well washed, is selected and made to take up a definite quantity of the acid. To prepare a cotton containing 10 per cent, Rennard recommends the following method: Dissolve 2 parts of salicylic acid in 15 pts. of alcohol, of 80 per cent, mix with 35 parts of water, at a temperature of 25 30° C.

WADSWORTH, MARTINEZ & LONGMAN'S
PURE PAINTS,
PREPARED
FOR
IMMEDIATE USE.
We furnish these Paints to the Dealer on favorable terms, and authorize their sale subject to the satisfaction of all buyers. We agree to repaint any house with English White Lead, or any other White Lead, if our Paints do not prove perfectly satisfactory. Evidence of the value of these Paints, is indicated in the increasing demand for them. Sample cards, &c., sent on application.
Wadsworth, Martinez & Longman,
Manufacturers and Importers, White Lead, Paints, Colors, Oils, &c.
307 PEARL ST. NEW YORK.

(77-86° F.) in a porcelain capsule, and introduce into it 10 parts of prepared cotton, which will soak up the whole of the liquid. By working it with a pestle, the liquid is equally divided over all parts of the cotton. The latter is now pressed, until 25 parts of liquid have been separated, which is used to impregnate a second portion. [It is just as easy to to take at once 20 parts of cotton, which are gradually incorporated with the solution.—ED. N. R.] The resulting moist cotton must be dried at the *ordinary temperature*, in a place *free from dust;* otherwise it will assume a faint reddish color, which, however, does not necessarily impair its value. —*Pharm. Z f. Russl.* 1876, 33.

REMEDY IN DIPHTHERIA.

Dr. Hopkins, in the *Physician and Pharmacist*, strongly urges the employment of acid tannate of iron as a local remedy in diptheria. It may be prepared he says, by the addition of one ounce of the muriated tincture of iron to one of a strong solution of tannin, and applied by means of a brush to the diseased throat, or elsewhere as the case may be; or what is perhaps a still better way, apply the muriated tincture of iron in full strength to the diseased part with a brush, wait a few moments, then apply the solution of tannin in the same way, thus forming a union of the two at the point of disease, having at the same time the advantage of chemical action, if there be any. [On examination a few hours after, the line of demarcation will be seen distinctly drawn by the discoloration of the diseased tissue, showing exactly the extent of the disease, the very thing desired, with a tendency to reparation, which will go on rapidly, if the system be properly treated with a nourishing diet and tonic and stimulating remedies. Dr. Hopkins regards this remedy as above and before all others.

THE MOST USEFUL DRUGS.

According to the *London Medical Times and Gazette*, a party of ten medical men were dining together not long since, and one of them, during dessert, started the question, that supposing all present were limited in their practice to a selection of six pharmacopœial remedies, which would be chosen as being most useful, compound drugs to be excepted. Each of the party wrote the names of the six drugs he should select, and handed to the doctor who started the inquiry. On examining the lists it was found a majority of votes were given in favor of opium, quinine, and iron; between mercury and iodide of potassium the votes were equally divided, as they were also between ammonia and chloroform.

The following are not by any means new, but we publish them by request:

COLORS FOR SHOW BOTTLES.

To secure bright and permanent colors it is best to use the neutral metallic salts, that have neither tendency to oxydize or reduce. The aniline salts yield a beautiful solution, but are not permanent.

BLUE.

Sulphate copper, ... 2 ounces.
Oil vitrol, ... ½ ounce.
Water, ... q. s.

RED.

Dissolve No. 40 Carmine in aqua ammonia, and dilute with water to the desired shade. Filter.

YELLOW.

Bicromate of potassa ..... 2 ounces.
Muriatic acid ..... q. s.
Water ..... q. s.

Dissolve the bichromate of potassa in the water; add the acid to set color and filter.

GREEN.

Sulphate copper ..... 2 ounces.
Bichromate potassa ..... q. s.
Water ..... q. s.

Dissolve the sulphate copper in a portion of the water, add the bichromate of potassa to give the desired shade; add the balance of the water, and filter.

MARKING INK OF TYRIAN PURPLE.

The linen or cotton goods to be marked are previously mordanted with a mixture of aluminum acetate and stannic chloride (tin crystals); after the spots have become perfectly dry, they are marked with a liquid prepared by saturating 5 grm. of ammonium carbonate with pure nitric acid and rubbing 3 to 4 grm. of carmine with the solution.

Importations, 1876.

The following is a complete list of the imports of Oils, Paints and Drugs entered at the ports of New York and Boston, for the present year up to date (in cases where weight cannot be correctly stated the number of packages alone will be given):

NEW YORK, August 2, 1876.

ROBERT B. BROWN & CO.

MANUFACTURERS OF

BRILLIANT

CASTOR OIL,

ST. LOUIS.

DRUG MARKET.

NEW YORK, Tuesday Ev'g, Aug. 15.

We have to note a quiet week in the drug line for round lots, though in a jobbing way there is a fair demand to be noted. The continued hot weather has its effect on trade, and we need not look for any great improvement until cooler days set in.

Opium has ruled quiet for lots in bond and we heard of no sales. Prices are a shade easier, and holders are now offering at $5 25 gold. There is a fair jobbing demand to be noted, which is being supplied at $7 05@7 10, with sales in lots of 200 lbs at these figures. Powdered is quiet at $7 90.

Morphine has been in fair demand and rules steady in price with sales of lots of 100 ozs, 300 ozs and 150 ozs at $4.50.

Quinine is in good demand and parties wanting spot lots have to pay $2.40, with fair sales making at this figure. Pelletiers is entirely out of the market, the total stock having been bought up at $2.35 and upwards. The principal manufacturers are entirely sold out, and they are only filling their contracts as fast as the production will allow. Orders for lots for prompt delivery are being refused by them, as they have no available stock to draw upon. They are still quoting $2.30, but this figure is for orders that can wait for a considerable period to be filled.

Quicksilver has ruled quiet during the week, and prices are easier again. We hear that negotiations are on foot for a round parcel, but have no particulars Prices are quoted at 50c gold for a round lot, while smaller parcels can be had at 52½@53c gold. One lot of 100 flasks which came to hand lately has sold at about 50@51c gold.

The London quotation July 27th was £9, with an upward tendency. This announcement was the cause of an immediate rise from 42½ to 45c, with more buyers for shipment to China than sellers. This being the largest producing country in the world, and that too at a less price than elsewhere, we do not see why this should not be the primary and governing market of the world. If it is not now, the time is not far distant when California will control the world's market for this product, as well as of others. We note purchases in lots of 1,500 flasks during the week at 42½@45c, the market closing strong at the outside figure. The Alaska, for Hong Kong, carried 1000 flasks, also 20 flasks to Yokohama. The steamship South Carolina carried via Panama 99 flasks for New York, 50 flasks for South America, and 650 flasks for London.—*Com. Herald, Aug. 3.*

Santonine is firmer, holders now asking $13 12½.

Mercurials are rather weaker and rule as follows: blue pill 43c; corrosive sublimate, 66c; calomel, 76c; red precipitate 86c, white do 96c.

Bermuda arrowroot has sold in a jobbing way at 45c. 3 kegs true brought 47½c. St. Vincent is selling in small lots as wanted, at 15@18c.

Balsam Copaiba is quiet, and with a full supply, prices are easier in tone, holders now offering to sell at 52@53c.

Balsam Tolu is quiet and easy in price at $2 50.

Sassafras bark is jobbing in fair sized parcels at 6@6½.

Camphor has sold fairly and rules firm in price, and nothing is now to be had at less than 27c; 25 bbls in lots sold at this figure.

Castile soap is in fair jobbing demand and rules steady in price at 8⅞@9c, with sales of 200 bxs. White is scarce and firm; 20 bxs sold at 16c, now held at 16¼c.

Althea root is in fair demand for cut, and small lots are selling at 28c for prime.

Glycerine is in steady jobbing demand and we quote American at 17c with sales of 500 lb lots at this price.

Gentian Root is in fair jobbing demand at 6½@7c. Powdered has sold in 3 bbl lots at 10½.

Castor Oil is firmer in price with jobbing sales making; AA is firmly held at 10½@10¾; 5 bbls sold at the lower figure.

Pink Root is in jobbing demand, and we note sale of 500 lbs at 22c.

Insect Powder has sold fairly at steady prices. We note sales of 25 kegs on private terms, and 5 kegs extra at 40c.

Canary seed are in slow demand, and prices are again lower, and lots can now be had at $2 75@3, with jobbing sales making at these figures.

Rape seed are selling in 5 bag lots at $3 75; a round lot could be had at less. English are to be quoted at $3 75@4 00, though some lots are still to be had at $3 60.

Hemp seed are steady in price, with sales of 20 bag lots at $1 85, the market closing steady at this figure.

Cassia buds are slow of sale; prices are rather steadier, and sales of 2 cs lots are making at 39c.

Tonca beans are quiet but steady in price; holders are quoting 70@90c, the latter for a prime article.

Citric acid is scarce, and firm in price; 2 kegs sold at 81c.

White mustard seed are scarce and rule firm in price; 10 bags sold at 8¼c, but none can now be had under 8½c. Brown is quiet but steady.

Shellac has been quiet during the week and rules easy in price; the only sale we hear of is 15 cases garnet at 20c gold.

Burgundy pitch is in small demand, but prices are steady at 6@7c, as to quality.

Cubebs are selling in case lots at 9@9¼c.

Salicylic acid has been in fair jobbing demand, and rules steady at $3.75@4.50, as to quantity and quality.

Ergot is firmer in tone with jobbing sales making; holders are now quoting 90c@$1 00, though this can be shaded.

Cox's gelatine is selling fairly and rules steady at $18 75.

Lunar caustic has advanced a shade and is now held at 87c.

Sarsaparilla is quiet in a large way and prices are quoted at 29@31c for Honduras; Mexican is firmer with jobbing sales making at 11@12c.

Spices have been in fair jobbing request and in the aggregate a fair amount of goods have been moved.

Pimento has sold rather freely, and prices are steady at 12@12¼ gold. Grindings are held at 11¼@11¾.

Nutmegs are jobbing in fair parcels, and holders still quote 85@90 gold.

Ginger is unchanged, and rules quiet at 6½ gold for Calcutta. African is nominal.

Cloves are in good demand, and prices are steady at 35@36c gold; stems are doing better at 14½c gold.

Cassia is selling in fair parcels, and rules steady at 18@20c gold for Batavia, and 20@21c gold for mats and cases. Saigon is held at 35@37½c gold.

Pepper sells fairly, and is quoted at 13½@13¾ for Sumatra and Singapore. White, 22½@23c.

Mace is in good demand, and parcels are moving at 95@96c gold for prime. Grindings are held at 85@90c gold.

Essential Oils have been in rather better demand during the week, and prices are steady.

Anis is selling slowly in small lots at $1.62½ gold.

Bergamot has sold more freely, and we hear of 15 cs Sandersons on private terms; holders are now quoting $4 for N A & Co.

Cassia is selling in case lots, and can now be had at 90c gold.

Clove has sold in small parcels as wanted at $1 80.

Lemon has been in more request and with fair sales making, prices are a shade steadier at $3 10 gold for N. A. & Co., and $3 25 gold for San's.

Peppermint has been quiet for pure oil, and prices are unchanged at $2 75. Case oil has been in rather better request, and we quote the price at $3 60@3 75.

Sassafras is quiet and easy at 47@48c.

Wintergreen is lower and we hear of sales of 100 lbs at $3 65. A round lo could be had at less.

90 William Street, New York.

J. P. LAROZE'S SYRUPS.

Are Elegant, Palatable Preparations of Various Medicaments in Common Use.

They are highly recommended by the Medical Profession in France, and adopted by the Public at Large.

LAROZE'S SYRUP of Bitter Oranges, an Anti-Nervous Tonic. Recommended by Medical Men as a means of regulating the functions of the stomach and intestines, and as a powerful auxiliary of preparations of Iron and of the Iodide and Bromide of Potassium.

SEDATIVE SYRUP of Bitter Oranges and of Bromide of Potassium (Chemically pure). A sure sedative in diseases of the heart and of the respiratory and digestive organs, in neuralgia, and in sleeplessness of children during dentition.

DEPURATIVE SYRUP of Bitter Orange-Peel and of Iodide of Potassium. An efficacious medicament in strumous, tubercular, cancerous, and rheumatic affections, and in scrofulous swelling of the knee, tumors of the breast, and secondary and tertiary manifestations.

CHALYBEATE SYRUP of Bitter Orange-Peel, Quassia, Amara, and Proto-Iodide of Iron. The liquid form is the best for administering Iron in green-sickness, leucorrhœa, disorders of menstruation, anæmia, rickets, etc.

New York: E. Fougera & Co. Quebec: Giroux & Co. Montreal: Devins Bolton.
Sold in **Paris** by J.-P. Laroze et Co., 2, *rue des Lions, Saint-Paul.*

MÉDAILLE D'HONNEUR.

ASTHME

CATARRHS, OPPRESSION, COUGH, PALPITATIONS and all affections of the respiratory organs, are at once stopped and cured by the LEVASSEUR TUBES.

WINCHELL'S PATENT OIL TANK

Patented September 26, 1871.

Is constructed of galvanized iron and japanned. Has a wood bottom underneath the metal bottom. A pump, which may be removed to transfer oil from a barrel to the tank without loss. A Drip Pan, which will be found a clean and inexpensive place for measures and funnels. Any overflow in filling small cans runs into the reservoir below. The Gauge Stick marks accurately the quantity contained in the tank. A cover over all prevents the accumulation of dust, evaporation, and unpleasant odor of oil, and is secure from fire. The tank may be locked if desired.

Retailers and consumers of oil should have one as a matter of safety, convenience and economy.

EVERY TANK IS WARRANTED.

SIZES: 50, 75, 100, 150, 200, 250 GALLONS.
